MEGA PLATA

THE MOST POWERFUL & RESISTANT CHROME EVER

Graffiti is ephemeral; persistence is essential. Nothing lasts forever, therefore to achieve lasting presence you have to preserve your legacy, continuously build, renovate, and expand.

To attain this goal, a paint which can withstand the elements, contains high pressure, speed, and coverage is required. With this objective in mind, Montana Colors presents to you the new MEGA PLATA.

The MEGA PLATA is a paint of superior quality, packaged with the perfect amount and proportion of gas. We have developed this new product with the vision and drive to establish it as the best chrome paint on the market. Though we have been through a long, arduous process, filled with many trials and tribulations, all our product tests have shown more than positive results.

We have achieved a constant and solid paint flow, diameter and coverage power never seen before; a totally new level of performance! And to top everything off, the gas is stable in all temperatures, allowing painting anywhere, even under the most extreme weather conditions.

One of the key points of this new silver chrome is "the pigment orientation". The new formula accommodates the pigment in the resin, thus improving the drying and re-painting time while providing a perfect interaction with the other colors in the MTN range.

Real size

(Single line painted from a distance of 20cm. - 8in.)

Mega powerful

Higher speed and covering capacity

Four Seasons

Better for operating in extreme temperatures
